

CREATES QUALITY

VISION

EXPERIENCE

Knowledge makes the difference: wide knowledge in this field means deep knowledge of the needs of dairy farmers.

CONTRACT OF THE PROPERTY OF T

Excellence starts here: offer of excellent quality without compromises, developed through continuous research, with attention to details and rigorous product testing.

PASSION

The core technology: the most innovative ideas arise from the engagement and the dedication of each member of Milkline team.

CLIENT FOCUS

High technology easy to use: we ensure constant standards of excellence and we provide clear and transparent information about our products.

INNOVATION

RESEARCH AND DEVELOPMENT

Research and development activities are carried out by a qualified internal staff, in charge of developing new products aiming at improving milking operations, helping to increase the quality and the profitability of your dairy farm.

The cooperations and partnerships with the main universities, public research organizations and partner companies in the field represent a key component in our innovation strategy, since they allow us to move along with new ideas and to experiment new solutions that anticipate the needs of farmers.

Through a strong and efficient research and development, an international network of skilled partners and the attention to the needs of farmers, we are able to constantly offer innovative solutions to dairy farms worldwide.

PLANNING

Milkline is able to offer advice about the planning and the design of a complete dairy farm.

Thanks to our internal dedicated staff, we are able to evaluate the real needs of our clients and to propose projects and solutions suitable to the local climatic conditions and to every single company.

Our drawings are realized using CAD 3D technology, in order to ensure that they can be easily understood by the client.

SERVICE

ASSISTANCE

Milkline is a big family that loves following and most of all looking after its clients, thanks to the timeliness, ability and professionalism of its dealers.

Our goal is to ensure a continuous and maximum yield, safeguarding the animal wellness.

Our team of dealers, easily accessible and highly skilled, is at your disposal to ensure professional advice and scheduled checks of your equipment, and also to intervene promptly in case of emergency.

During the start-up of the system our dealers provide a professional training to optimize milking operations and system utilization, scheduled controls and customized advice according to the herd size, the number of milking points, the milking and cleaning time of the system.

Our products and advanced solutions for milking, based on the best technologies, ensure a simple, fast and proper execution of the milking process together with the animal wellness. Milkline is able to optimize production and quality of your milk thanks to innovative milking parlours and up-to-date automatic control systems, removal systems, pulsators, milk meters and flow indicators, milking clusters, liners, tubes, terminals, milk pumps, vacuum systems, cleaning units, selection gates, filters, detergents and much more.

HERD MANAGEMENT

Our herd management system collects and processes data of every single animal and provides information, ready to use, about animal health, milking process and all the activities that occur in the farm. Dataflow II is a software, compatible with third-party systems as well, that allows to take decisions safely for an efficient and profitable herd management.

MILK REFRIGERATION

A full range of milk cooling systems to choose from according to the cost, the efficiency and the quantity of milk produced. Thanks to Milkline products it is possible to get a fast and constant cooling of the milk just drawn in order to safeguard the quality of productions.

FARM

FEEDING

An efficient feeding of calves and a good management can considerably reduce possible future problems of animal health, reduce costs, maximize income and create the conditions for a steady growth of the firm. The best method is to feed calves with small portions individually fitted. Milkline solutions allow to schedule and check the supply of portions properly balanced to the calf (and/or kid/lamb) during the whole day, in a way very similar to the natural behaviour of the animal.

MILK QUALITY AND ANIMAL HEALTH

We provide a wide range of solutions, equipment, consumables and accessories designed to provide an excellent hygiene during milking and to improve the udder health. Our sanitising pre-milking and post-milking treatments, products for teat care and for operator's hygiene ensure the highest quality of milk production.

MAL COMFORT

Our range of products for the animal comfort includes barn equipment, mattresses, rubber mats and brushes for cows. All these products are able to improve the rest and the hygiene of the animals in order to keep them healthy and productive.
